Essential visibility

Drive data-driven decision making to keep your organization on the right path

Data-driven decisions that transform organizations require broad and deep visibility into financial and operational data. Where other systems rely on external tools for visibility, Sage Intacct provides built-in tools to display real-time, drillable source data. By approaching data from multiple directions, through multiple tools, finance leaders can pull and analyze information from the Sage Intacct Intelligent GL[™], subledgers, and supporting data objects. Information can be shared through a variety of means like customizable dashboards or distributed through export or email, including PDF and Excel files.

Multiple points of accessibility

- 1. Customizable dashboards allow role-based and processbased metrics, reports, and charts to be created for quick insight and data-driven decisions.
- 2. For in-depth reporting, the Sage Intacct Report Center contains a library of reports and financial statements, as well as charts and tools for modifying, duplicating, or creating completely new reports and charts.
- 3. Activity-specific subledger reports, like customer aging and check registers, can also be found in the individual task area.
- 4. External processes, like business intelligence or data warehousing, can be driven by using Web Services APIs or setting up data delivery services.

"We're now able to track contracts better because all our data is coming from one place, whereas before we used multiple sources and a lot of error-prone Excel manipulation. Sage Intacct delivers accurate reporting for all our billed and unbilled, deferred and paid contracts, providing full transparency into our customer base so we can keep our fingers on the pulse of everything from contract renewals, upsells, and cross-sells, to churn by product and amortized commissions expenses."

Lisa Schulz

"Sage Intacct's dashboards, report writer, dimensions, and statistical capabilities are just phenomenal. We created magnificent dashboards that were unimaginable to us just a couple months before deploying the system, and they've dramatically changed how we analyze financial data."

Alejandro Pérez

Sage

Chief Happiness Officer & CEO, Komet Sales

Financial reports and charts

Real-time data from the Sage Intacct Intelligent GL

Financial reports and charts rely on real-time data from the Sage Intacct Intelligent GL[™] to produce income statements, balance sheets, cashflow statements, and more. They provide filtering and hierarchy based on dimensional structures. Dimensions are things like location, department, customer, or project, that can be assigned to or "tagged" on transaction line items. Organizations can even create custom dimensions, like grant, fund, or airplane anything that they might want to report by. Individual dimensions and dimension groups can be defined by users to mix and match information, such as looking at sales orders by location and by customer. The financial report writer and chart builder give control to the finance team to get at key data to inform decisionmaking. * Form Research Conserve Conserve To be Not YTD 1023408

Activityspecific reporting

Task centered reporting on accounting processes

Out-of-the-box, task-centered reports have set, selectable filters based on standard financial processes. These "standard" reports form the backbone of daily activity for the accounting team. Process reports provide the team with information for processing transactions, interacting with customers and vendors, and speeding up the close.

"With Sage Intacct, our general managers and department heads hold greater accountability, because management can quickly pinpoint areas of financial concern and have accurate information with which to make better business decisions. As a result, three of our struggling entities moved into the black, our overall gross margins improved by 20%, cash flow increased by nearly a half a million dollars, and our real estate asset values grew by over \$5 million."

List reporting across related data tables

With the Custom Report Writer, users create ad-hoc reports to lookup, sort, and filter information across related records, such as finding phone numbers for all the customers that purchased a particular item. These reports often work in conjunction with activity reports to provide data specific to an organization's unique business processes. A report wizard makes building these reports fast and easy—no coding required. "Sage Intacct lets us run utilization, efficiency, and expense reporting at the project, task, department, or customer level for granular transparency into our labor costs and profitability across various operational categories. This valuable insight helps CTI's leaders manage existing employees' workloads, as well as project future employment needs based on upcoming projects and proposals."

Brian Lawrence

Senior Director, Finance & Taxation, CTI

Interactive custom reporting

In-depth, interactive analysis

The Sage Intacct Interactive Customer Report Writer provides in-depth look-up and analysis of transactional data for making comparisons and finding trends. The Interactive Report Writer is available for view only or build and view. With view only, users can drill, filter, sort, and expand reports to answer specific business questions. A library of more than 60 interactive reports allow for a quick start and rapid analysis of key transactional information. For data-savvy users, the build and view option provides powerful and advanced report creation with live production data while building, hierarchical field selection, drag and drop, automatic formatting, formulas, and subtotals.

"One of my favorite things about Sage Intacct is having the ability to easily create custom reports on my own. Now, I'm in a position to provide reports more quickly and be a true champion within the organization."

Robust permissions

At Sage Intacct, visibility and security go hand in hand. Reporting comes with granular permissions, allowing the administrator to grant access only when and where it's needed. You can choose to allow access to everyone, limit it to certain user groups, or give individual permission to key people.

Share just what is needed

"Sage Intacct puts real-time financial information into the hands of our managers so they're more apt to take ownership and be proactive. They no longer call finance to ask, 'why are my food, paper, or repair costs so high?' because they have the tools they need to identify problem areas themselves and investigate what's impacting their store's profitability."
